                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  mplement factor D (EC 3.4.21.46) precursor [validated] - human (fragment)
Alternate names: adipsin; C3 convertase activator
Species: Home sapiens (man)
Date: 28-Aug-1985 #sequence revision 31-Dec-1992 #text_change 08-Dec-2000
Accession: A40197; A00936; A60571; S66645
White, R.T.; Damm, D.; Hancock, N.; Rosen, B.S.; Lowell, B.B.; Usher, P.; Flier, J.S.;
Biol. Chem. 267, 9210-9213, 1992
Title: Human adipsin is identical to complement factor D and is expressed at high leve Reference number: A40197; MUD:92250520; PMID:1374388
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       semenogelase (EC.3.4.21.77) precursor - rhesus macaque N; Alternate names: gamma-seminoprotein; P-30 antigen; prostate-specific antigen; prostate \delta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Molecule type: protein ; Molecule type: palke, N.; Holtkamp, U.; Hoerl, W.H.; Tschesche, H. EBS Lett. 371, 300-302, 1995 . . . Title: Inhibition of degranulation of human polymorphonuclear leukocytes by complement ; Meference number: $66645; MUID:96013156; PMID:7556615
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Molecule type: protein ;Residues: 19-44,'G',46-51,'Q',53-75,'TH',78,'P',80-83,'XXXITIE',90-172,86-91,185-235,' ;Note: a few residues were assigned from the previously published sequence of Reid et a ;Miyata, T.; Oda, O.; Inagi, R.; Sugiyama, S.; Miyama, A.; Maeda, K.; Nakashima, I.; Ya ol. #### ALIGNMENTS

```
cleaves insulin B chain at 6-Leu-|-Cys-7, 16-Tyr-|-Leu-17, 25-Phe-|-Tyr-25, and 26-Tyr-|-Thr-27. Could play a role in the activation of precursors to inflammatory cytokines.

--- TISSUE SPECIFICITY: Abundantly expressed in the skin and is expressed by keratinocytes in the epidermis. Very low levels are also seen in the brain and kidney.

---- SIMILARITY: Belongs to peptidase family SI. Kallikrein subfamily.

                                                                                                                                                                                                                                                 in kininogen to release Lys-bradykinin.
-!- CATALYTIC ACTIVITY: Preferential cleavage of Arg-|-Xaa bonds in small molecule substrates. Highly selective action to release kalidin (lysyl-bradykinin) from kininogen involves hydrolysis of Met-|-Xaa or Leu-|-Xaa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        IsoId=P20151-3; Sequence=VSP_005400;
SIMILARITY: Belongs to peptidase family S1. Kallikrein subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     InterPro; IPR001254; Peptidase_S1.

U Biol. Chem. 270:4399-24405 [1950]

U CAPLYTIC ACTIVITY: Cleaves factor B when the latter is complexed to that of Cls in the classical pathway. Its function is homologous to that of Cls in the classical pathway.

C -1 CAPLYTIC ACTIVITY: Cleaves component factor B (Arg. | -Lys) when in complex with C3b or with cobra venom factor (CVF).

C -1 SIMILARITY: Belongs to peptidase family $1.

Ref. 3 sequence had a peptide in the wrong order and another one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Activity, TAS.

("Meloblastine) and cathepsin G.";

Immunogenetics 46:181-191(1937)

- '- FUNCTION: Polymorphonuclear leukocyte serine protease that degrades elastin, fibronectin, laminin, vitronectin, and collagen types I, III, and IV (in vitro) and causes emphysema when administered by tracheal insufflation to hamsters (By similarity).

- '- CATALYTIC ACTIVITY: Hydrolysis of proteins, including elastin, by preferential cleavage: Ala | -Xaa | -Xaa | -Xaa |

- '- SIMILARITY: Belongs to peptidase family SI. Elastase subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MEDLINE=99126347; PubMed=9925946; Sturrock A., Franklin K.F., Wu S.-Q., Hoidal J.R.; Carrock A., Franklin K.F., Wu S.-Q., Hoidal J.R.; Mouse proteinase-3 "Characterization and localization of the genes for mouse proteinase-3 (Prtn3) and neutrophil elastase (Elaz)."; Cytogenet. -!- FUNCTION: Thrombin-like snake venom serine protease.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed by the venom gland.
-!- SIMILARITY: Belongs to peptidase family S1. Snake venom subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Trimeresurus gramineus (Indian green tree viper) (Green habu snake). I. PUNCTION: PSA presumably hydrolyzes the high molecular mass seminal vesicle protein thus leading to the liquefaction of the seminal coagulum. PSA is a glandular kallikrein.
I. CATALYTIC ACTIVITY: Preferential cleavage: Tyr-1-Xa.
SIMILARITY: Belongs to peptidase family SI. Kallikrein subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
